

Saguaro National Park

Centennial Saguaro Survey – Plot 32

November 21, 2015

Alpha Phi Omega

Students from UA Alpha Phi Omega collected data from plot 32, which was established in 1990. Each column in the graph below indicates how many saguaros were counted. The columns show a size range, from smallest to largest. The light blue columns represent the saguaros APO monitored. Comparing the data from past surveys, there is a slight increase of saguaros as a whole on plot 32. Fortunately, we found two saguaros less than ten centimeters, giving us hope for an increase of saguaro germination in the park. Thanks Alpha Phi Omega!

Saguaro Plot #32
